Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1.-28. (Canceled)

1   29.   (Currently amended) A method for generating a printable representation
2   of multimedia information stored in a plurality of multimedia documents, the method
3   comprising:
4   receiving, at one or more computer systems, information indicative of selection
5   criteria;
6   generating, with one or more processors associated with the one or more
7   computer systems, a printable representation of each multimedia document in the plurality of
8   multimedia documents from multimedia information electronically stored in the multimedia
9   document, the printable representation of each multimedia document incorporating printable
10   representations of at least two types of the multimedia information of the multimedia document;
11   identifying, with the one or more processors associated with the one or more
12   computer systems, a first printable representation of multimedia information associated with
13   electronically stored in a first multimedia document based on information associated with one or
14   more of the printable representations of the first printable representation of the at least two types
15   of multimedia information in the first multimedia document satisfying the selection criteria;
16   identifying, with the one or more processors associated with the one or more
17   computer systems, a second printable representation of multimedia information associated with
18   electronically stored in a second multimedia document based on information associated with one
19   or more of the printable representations of the second printable representation of the at least two
20   types of multimedia information in the first multimedia document satisfying the selection
21   criteria; and

22   generating, with the one or more processors associated with the one or more

23   computer systems, a consolidated printable representation of the multimedia information

24   ~~associated with~~ electronically stored in the first multimedia document and the multimedia

25   information ~~associated with~~ electronically stored in the second multimedia document based on at

26   least one portion extracted from the first printable representation of the first multimedia

27   document and at least one portion extracted from the second printable representation of the

28   second multimedia document.

1   30.   (Currently amended) The method of claim 29 wherein identifying the first

2   printable representation of the multimedia information ~~associated with~~ electronically stored in

3   the first multimedia document ~~based on the information associated with the first printable~~

4   ~~representation satisfying the selection criteria~~ or identifying the second printable representation

5   of the multimedia information ~~associated with~~ electronically stored in the second multimedia

6   document ~~based on the information associated with the second printable representation satisfying~~

7   ~~the selection criteria~~ comprises analyzing multimedia information stored in a multimedia

8   document ~~corresponding to the first printable representation or the second printable~~

9   ~~representation~~ for information that satisfies the selection criteria.

1   31.   (Currently amended) The method of claim 29 wherein identifying the first

2   printable representation of the multimedia information ~~associated with~~ electronically stored in

3   the first multimedia document ~~based on the information associated with the first printable~~

4   ~~representation satisfying the selection criteria~~ or identifying the second printable representation

5   of the multimedia information ~~associated with~~ electronically stored in the second multimedia

6   document ~~based on the information associated with the second printable representation satisfying~~

7   ~~the selection criteria~~ comprises analyzing data stored in a printable representation of a

8   multimedia document ~~the first printable representation or the second printable representation~~ for

9   information that satisfies the selection criteria, the printable representation incorporating

10   printable representations of at least two types of multimedia information of the multimedia

11   document.

1   32.   (Previously presented) The method of claim 29 further comprising

2   printing the consolidated printable representation using an output device to generate a paper-

3   based document comprising one or more printed pages.

1   33.   (Currently amended) The method of claim 29 wherein generating, with

2   the one or more processors associated with the one or more computer systems, the consolidated

3   printable representation of the multimedia information ~~associated with~~ electronically stored in

4   the first multimedia document and the multimedia information ~~associated with~~ electronically

5   stored in the second multimedia document comprises:

6   extracting at least one printable page from a plurality of pages of the first

7   printable representation that comprises information that satisfies the selection criterion;

8   extracting at least one printable page from a plurality of pages of the second

9   printable representation that comprises information that satisfies the selection criterion; and

10   consolidating the at least one printable page extracted from the first printable

11   representation and the at least one printable page extracted from the second printable

12   representation into the consolidated printable representation.

1   34.   (Currently amended) The method of claim 29 wherein generating, with

2   the one or more processors associated with the one or more computer systems, the consolidated

3   printable representation of the multimedia information ~~associated with~~ electronically stored in

4   the first multimedia document and the multimedia information ~~associated with~~ electronically

5   stored in the second multimedia document comprises annotating either the at least one portion of

6   the first printable representation or the at least one portion of the second printable representation

7   in the consolidated printable representation.

    35.   (Canceled)

1   36.   (Previously presented) The method of claim 29 further comprising

2   determining the selection criteria based on a profile associated with an individual.

1   37.   (Currently amended) The method of claim 29 further comprising

2   generating a cover sheet associated with the consolidated printable representation of the

3   multimedia information ~~associated with~~ electronically stored in the first multimedia document

4   and the multimedia information ~~associated with~~ electronically stored in the second multimedia

5   document.

1   38.   (Currently amended) A non-transitory computer-readable medium storing

2   computer-executable code for generating a printable representation of multimedia information

3   stored in a plurality of multimedia documents, the non-transitory computer-readable medium

4   comprising:

5   code for receiving information indicative of selection criteria;

6   code for generating a printable representation of each multimedia document in the

7   plurality of multimedia documents from multimedia information electronically stored in the

8   multimedia document, the printable representation of each multimedia document incorporating

9   printable representations of at least two types of the multimedia information of the multimedia

10   document;

11   code for identifying a first printable representation of multimedia information

12   ~~associated with~~ electronically stored in a first multimedia document based on ~~information~~

13   ~~associated with~~ one or more of the printable representations of the first printable representation

14   of the at least two types of multimedia information in the first multimedia document satisfying

15   the selection criteria;

16   code for identifying a second printable representation of multimedia information

17   ~~associated with~~ electronically stored in a second multimedia document based on ~~information~~

18   ~~associated with~~ one or more of the printable representations of the second printable

19   representation of the at least two types of multimedia information in the first multimedia

20   document satisfying the selection criteria; and

21   code for generating a consolidated printable representation of the multimedia

22   information ~~associated with~~ electronically stored in the first multimedia document and the

23   multimedia information ~~associated with~~ electronically stored in the second multimedia document

24   based on at least one portion extracted from the first printable representation <u>of the first</u>

25   <u>multimedia document</u> and at least one portion extracted from the second printable representation

26   <u>of the second multimedia document</u>.

1   39.   (Currently amended) The non-transitory computer-readable medium of

2   claim 38 wherein the code for identifying the first printable representation of the multimedia

3   information ~~associated with~~ <u>electronically stored in</u> the first multimedia document ~~based on the~~

4   ~~information associated with the first printable representation satisfying the selection criteria~~ or

5   the code for identifying the second printable representation of the multimedia information

6   ~~associated with~~ <u>electronically stored in</u> the second multimedia document ~~based on the~~

7   ~~information associated with the second printable representation satisfying the selection criteria~~

8   comprises code for analyzing multimedia information stored in a multimedia document

9   ~~corresponding to the first printable representation or the second printable representation~~ for

10   information that satisfies the selection criteria.

1   40.   (Currently amended) The non-transitory computer-readable medium of

2   claim 38 wherein the code for identifying the first printable representation of the multimedia

3   information ~~associated with~~ <u>electronically stored in</u> the first multimedia document ~~based on the~~

4   ~~information associated with the first printable representation satisfying the selection criteria~~ or

5   the code for identifying the second printable representation of the multimedia information

6   ~~associated with~~ <u>electronically stored in</u> the second multimedia document ~~based on the~~

7   ~~information associated with the second printable representation satisfying the selection criteria~~

8   comprises code for analyzing data stored in <u>a printable representation of a multimedia document</u>

9   ~~the first printable representation or the second printable representation~~ for information that

10   satisfies the selection criteria<u>, the printable representation incorporating printable representations</u>

11   <u>of at least two types of multimedia information of the multimedia document</u>.

1   41.   (Previously presented) The non-transitory computer-readable medium of

2   claim 38 further comprising code for printing the consolidated printable representation using an

3   output device to generate a paper-based document comprising one or more printed pages.

1   42.   (Currently amended) The non-transitory computer-readable medium of

2   claim 38 wherein the code for generating the consolidated printable representation of the

3   multimedia information ~~associated with~~ electronically stored in the first multimedia document

4   and the multimedia information ~~associated with~~ electronically stored in the second multimedia

5   document comprises:

6   code for extracting at least one printable page from a plurality of pages of the first

7   printable representation that comprises information that satisfies the selection criterion;

8   code for extracting at least one printable page from a plurality of pages of the

9   second printable representation that comprises information that satisfies the selection criterion;

10   and

11   code for consolidating the at least one printable page extracted from the first

12   printable representation and the at least one printable page extracted from the second printable

13   representation into the consolidated printable representation.

1   43.   (Currently amended) The non-transitory computer-readable medium of

2   claim 38 wherein the code for generating the consolidated printable representation of the

3   multimedia information ~~associated with~~ electronically stored in the first multimedia document

4   and the multimedia information ~~associated with~~ electronically stored in the second multimedia

5   document comprises code for annotating either the at least one portion of the first printable

6   representation or the at least one portion of the second printable representation in the

7   consolidated printable representation.

44.   (Canceled)

1   45.   (Previously presented) The non-transitory computer-readable medium of

2   claim 38 further comprising code for determining the selection criteria based on a profile

3   associated with an individual.

1   46.   (Currently amended) The non-transitory computer-readable medium of

2   claim 38 further comprising code for generating a cover sheet associated with the consolidated

3   printable representation of the multimedia information ~~associated with~~ electronically stored in

4   the first multimedia document and the multimedia information ~~associated with~~ electronically

5   stored in the second multimedia document.

1   47.   (Currently amended) A system for generating a printable representation of

2   multimedia information stored in a plurality of multimedia documents, the system comprising:

3   a processor; and

4   a memory in communication with the processor and configured to store a set of

5   instructions which when executed by the processor configured the processor to:

6   receive information indicative of selection criteria;

7   generate a printable representation of each multimedia document in the

8   plurality of multimedia documents from multimedia information electronically stored in

9   the multimedia document, the printable representation of each multimedia document

10   incorporating printable representations of at least two types of the multimedia

11   information of the multimedia document;

12   identify a first printable representation of multimedia information

13   ~~associated with~~ electronically stored in a first multimedia document based on ~~information~~

14   ~~associated with~~ one or more of the printable representations of the first printable

15   representation of the at least two types of multimedia information in the first multimedia

16   document satisfying the selection criteria;

17   identify a second printable representation of multimedia information

18   ~~associated with~~ electronically stored in a second multimedia document based on

19   ~~information associated with~~ one or more of the printable representations of the second

20   printable representation of the at least two types of multimedia information in the first

21   multimedia document satisfying the selection criteria; and

22   generate a consolidated printable representation of the multimedia

23   information ~~associated with~~ electronically stored in the first multimedia document and

24   the multimedia information ~~associated with~~ electronically stored in the second

25   multimedia document based on at least one portion extracted from the first printable

26   representation and at least one portion extracted from the second printable representation.

1   48.   (Currently amended) The system of claim 47 wherein to identify the first

2   printable representation of the multimedia information ~~associated with~~ electronically stored in

3   the first multimedia document ~~based on the information associated with the first printable~~

4   ~~representation satisfying the selection criteria~~ or to identify the second printable representation of

5   the multimedia information ~~associated with~~ electronically stored in the second multimedia

6   document ~~based on the information associated with the second printable representation satisfying~~

7   ~~the selection criteria~~ the processor is configured to analyze multimedia information stored in a

8   multimedia document ~~corresponding to the first printable representation or the second printable~~

9   ~~representation~~ for information that satisfies the selection criteria.

1   49.   (Currently amended) The system of claim 47 wherein to identify the first

2   printable representation of the multimedia information ~~associated with~~ electronically stored in

3   the first multimedia document ~~based on the information associated with the first printable~~

4   ~~representation satisfying the selection criteria~~ or to identify the second printable representation of

5   the multimedia information ~~associated with~~ electronically stored in the second multimedia

6   document ~~based on the information associated with the second printable representation satisfying~~

7   ~~the selection criteria~~ the processor is configured to analyze data stored in a printable

8   representation of a multimedia document ~~the first printable representation or the second printable~~

9   ~~representation~~ for information that satisfies the selection criteria, the printable representation

10   incorporating printable representations of at least two types of multimedia information of the

11   multimedia document.

1   50.   (Previously presented) The system of claim 47 wherein the processor is

2   further configured to print the consolidated printable representation using an output device to

3   generate a paper-based document comprising one or more printed pages.

1   51.   (Currently amended) The system of claim 47 wherein to generate the

2   consolidated printable representation of the multimedia information ~~associated with~~

3   <u>electronically stored in</u> the first multimedia document and the multimedia information ~~associated~~

4   ~~with~~ <u>electronically stored in</u> the second multimedia document the processor is further configured

5   to:

6   extract at least one printable page from a plurality of pages of the first printable

7   representation that comprises information that satisfies the selection criterion;

8   extract at least one printable page from a plurality of pages of the second printable

9   representation that comprises information that satisfies the selection criterion; and

10   consolidate the at least one printable page extracted from the first printable

11   representation and the at least one printable page extracted from the second printable

12   representation into the consolidated printable representation.

1   52.   (Currently amended) The system of claim 47 wherein to generate the

2   consolidated printable representation of the multimedia information ~~associated with~~

3   <u>electronically stored in</u> the first multimedia document and the multimedia information ~~associated~~

4   ~~with~~ <u>electronically stored in</u> the second multimedia document the processor is further configured

5   to annotate either the at least one portion of the first printable representation or the at least one

6   portion of the second printable representation in the consolidated printable representation.

          53.   (Canceled)

1   54.   (Previously presented) The system of claim 47 wherein the processor is

2   further configured to determine the selection criteria based on a profile associated with an

3   individual.

Appl. No. 10/001,891
Amdt. dated November 4, 2011
Reply to Office Action of August 4, 2011

PATENT

1   55.   (Previously presented) The system of claim 47 wherein the processor is

2   further configured to generate a cover sheet associated with the consolidated printable

3   representation of the multimedia information associated with the first multimedia document and

4   the multimedia information associated with the second multimedia document.
